

Safe nations are built on Secure Networks

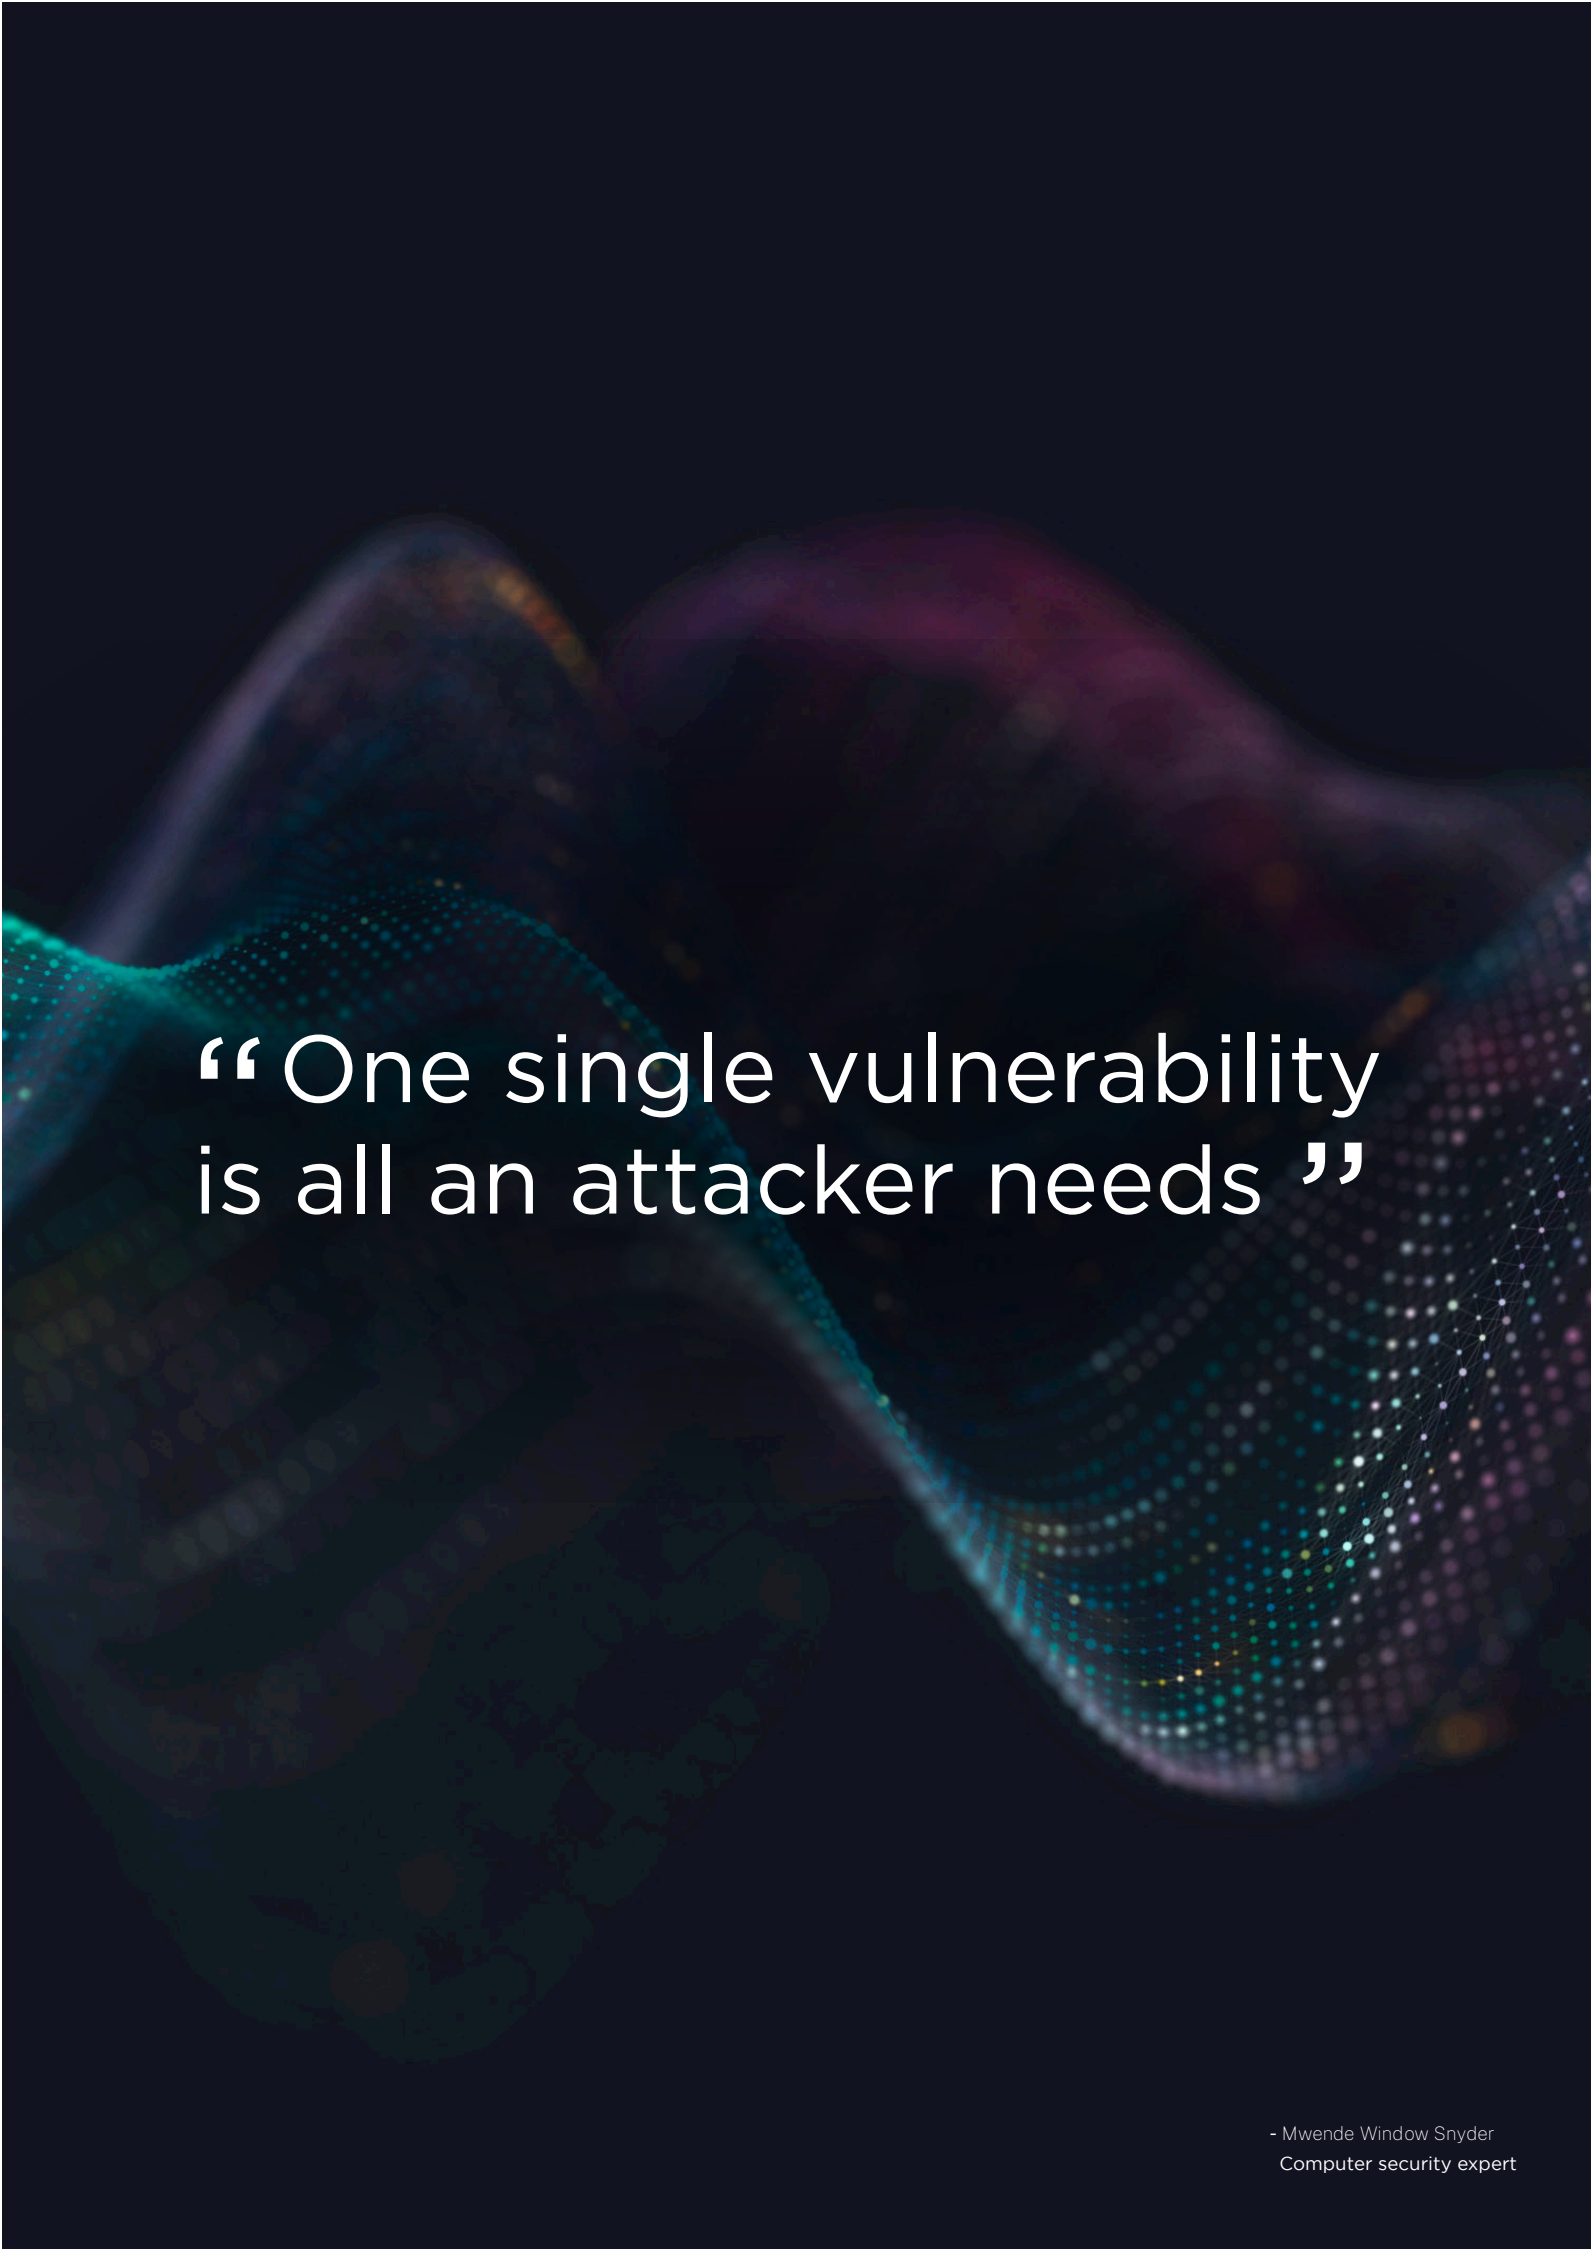

Architects of digital transformation

Invenia is a leading digital infrastructure services company. We enable telcos, data center companies, and large enterprises (in PSUs, Defence, BFSI, Mining, Energy, and Healthcare) across India and the UK with advanced capabilities in designing, building, and managing digital landscapes.

We enable digital transformation by providing state-of-the-art Connectivity Services, System Integration Services (Network, Cloud, and Cybersecurity), Data Center Services, and Managed Services.

Driven by our purpose of 'Empowering next-generation innovation through cutting-edge digital infrastructure,' we challenge the status quo and shift the trajectory of what's possible. This creates sustainable value for our customers, investors, and employees and fuels human progress.

“One single vulnerability
is all an attacker needs”

Safe networks warrant citizen safety

We are vulnerable to

- Crimes against citizens, women and children
- Geo-politically induced tensions
- Threats to national security

We desire

- Identification and capture of anti-national elements and criminals
- Early detection & suppression of plausible attacks
- Reduction in turnaround time from FIR to chargesheet
- Reduction in incident response time
- Creation of a centralised database of criminals and most wanted

We at Invenia are committed to creating secure and safe networks for a safe nation

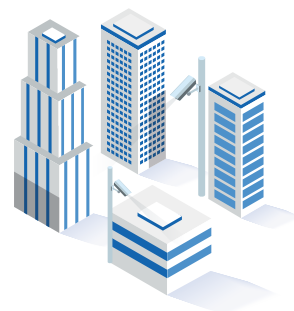

Defence

We have built intrusion proof communication network for defence forces

Smart Cities

We have implemented safe city surveillance to provide for an end-to-end safety ecosystem

Safe cities

We have designed and deployed smart city network and applications for a digitally advanced governance and functioning

We offer intrusion proof infrastructure and solution stack powered by sophisticated AI. The networks we design address issues of coverage, capacity and control. These networks provide operational transformation, automation, and efficiency. We have aided in developing India's command and control centres with real-time application level granularity and responsiveness.

We have talent that overcame

Rugged
terrain

Sub-zero
temperature

Local
resistance

Geopolitical
constraints

We were entrusted with the task of creating one of the most secure intrusion proof network in Jammu and Kashmir. We encountered numerous challenges in execution due to J&K's geography, extreme weather conditions, constant infiltration, and inhuman breathing conditions. To top it up, the absence of skilled resources, Right of Way (ROW) restrictions, co-ordination with multiple stakeholders and safety of manpower increased the vulnerability of our team. Standing true to our promise of delivering smarter networks, our team overcame these extreme challenges in service of the nation.

Our only security is the ability
to deliver on our promise of
large, secure networks

We provide a solution of superior performance

Speed & Scale

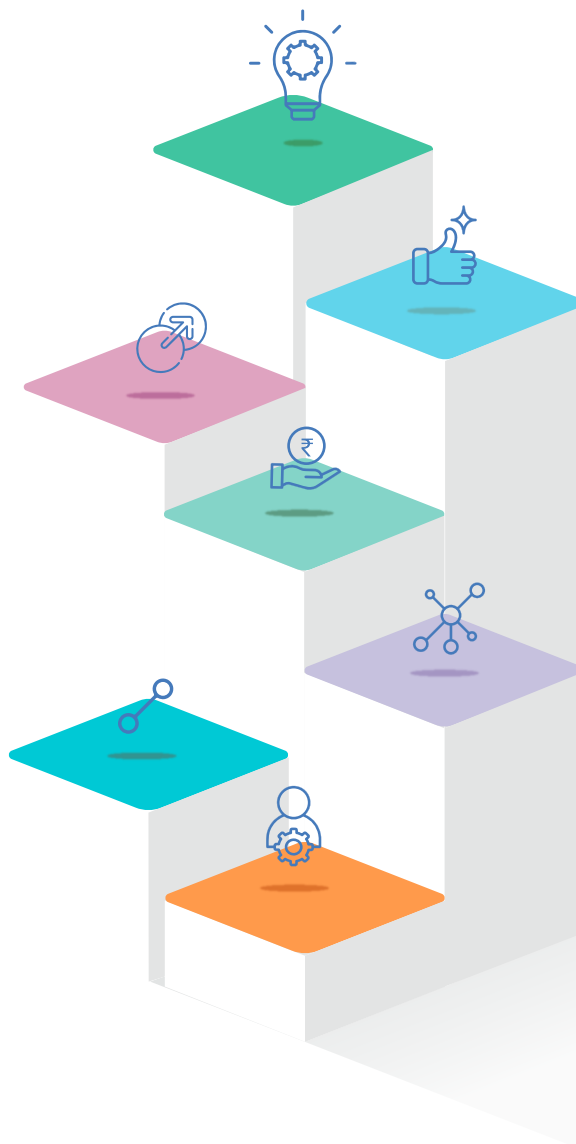

Faster deployment of next-gen networks.
Leverage the best technology to create highly scalable, responsive and agile future-grade networks

Total Cost of Ownership (TCO) Optimised Solution

Fit to the budget availability and high ROI along with significant cost savings

Uniquely Tailored E2E Solution

Resolving customer pain areas of network creation, operation and upgradation

Mitigating Local Risk

Knowledge and experience of executing complex projects in local ecosystem

Better Performance

Exceptional performance in terms of scalability, reliability, resilience and Latency

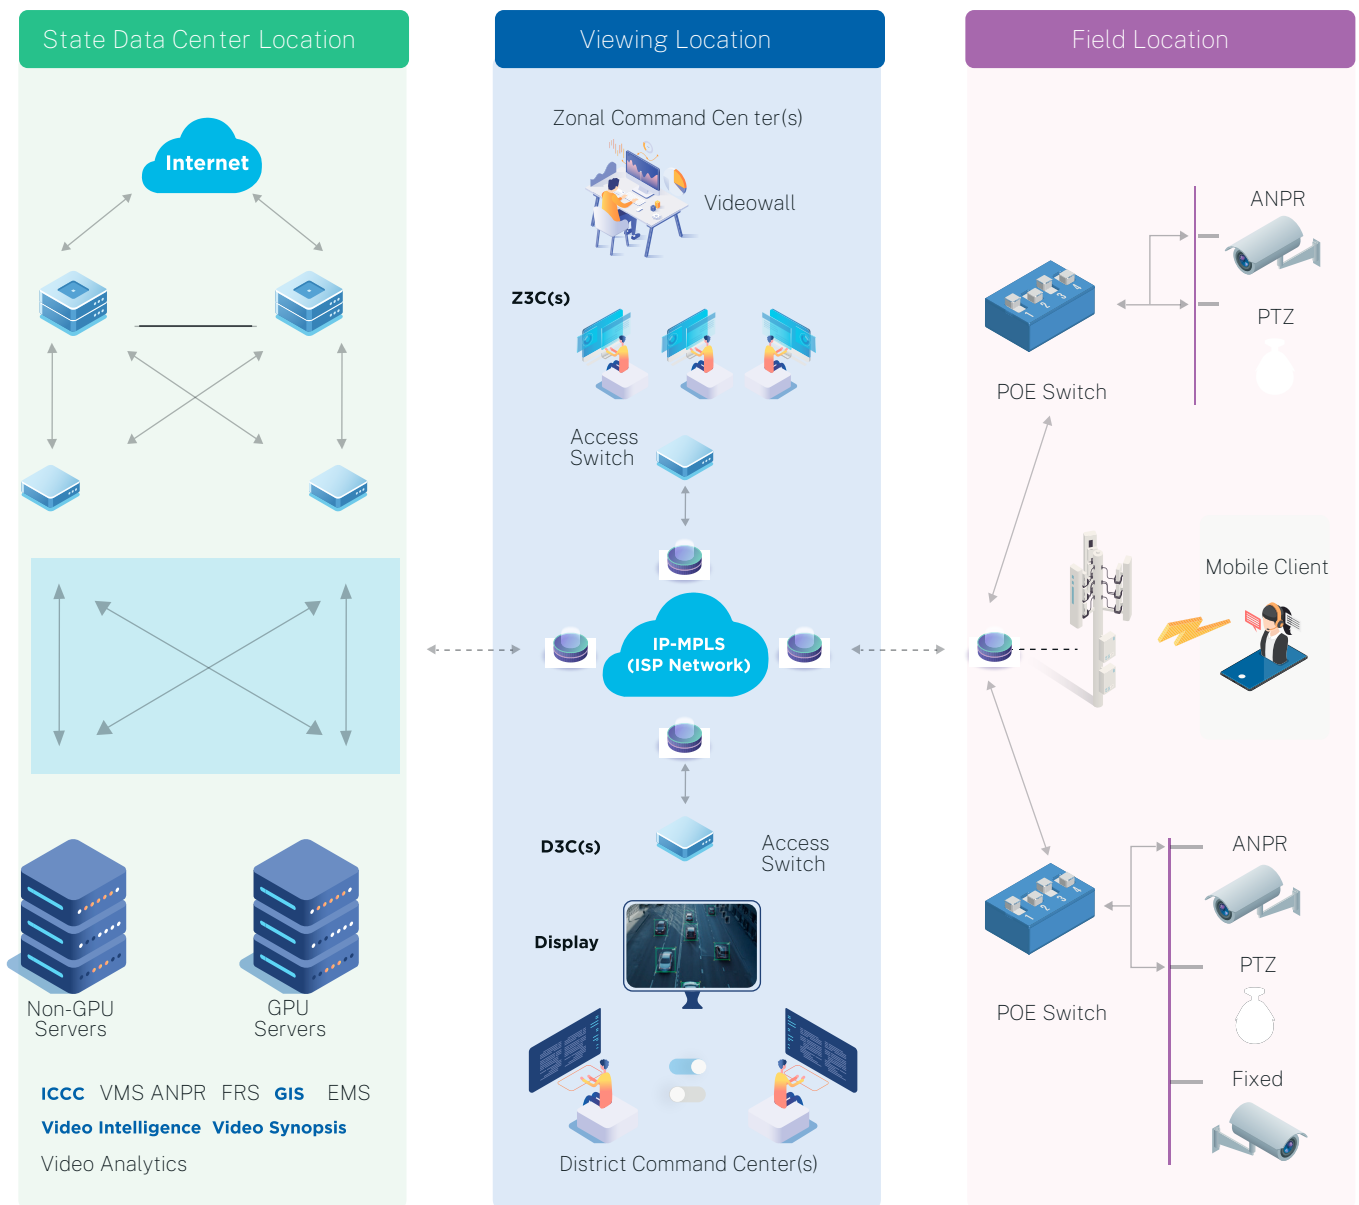

Modern Networks Designed to Last

Futuristic solutions with additional life span

Better Customer Response Management

Enables order processing systems to run 24*7*365 resulting in reduced SLA violations and better ARPU

Our resilient, scalable and secure architecture

Our Service Offerings

Data Center Services

Design, Build and Manage high-density infrastructure with precision cooling, power systems, and seamless interconnectivity for optimal performance.

Cloud Services

Simplify, modernize, migrate & accelerate your cloud journey with our strategic solutions that handle legacy complexities and ensure secure, scalable infrastructure.

Cybersecurity Services

Protect your digital assets with our robust cybersecurity solutions, ensuring enterprise security and digital trust.

Fibre Services

Build faster, more reliable networks with our expertise in fibre deployment and wireless solutions, enhancing connectivity and performance.

Managed Services

Experience seamless operations with our comprehensive managed services, tailored to meet your business needs.

Network Services

Our network design, build and transformation services deliver network models that can transform a business's agility and efficiency.
